EDUCATION

Villanova University

Bachelor of Science in Computer Science

Magna Cum Laude • Upsilon Pi Epsilon • Dean's List

Villanova, PA

GPA: 3.86

TECHNICAL SKILLS

Programming Languages: TypeScript • JavaScript • HTML/CSS • SQL • Java • Python

Frameworks & Libraries: React • React Native • Jest

Tools: Git • GitHub • Docker • AWS • Jenkins • Storybook • Chromatic • Datadog • Expo • Elasticsearch

EXPERIENCE

Chewy, Inc.

Boston, MA

Software Engineer I

December 2025 – Present

- Led frontend development for customer-facing Product Detail Page (PDP) experiences, owning technical design, implementation, experimentation, and cross-team integrations across Chewy's high-traffic e-commerce platform.
- Led end-to-end development of Ship Once with Autoship on the Product Detail Page, building a new Buy Once call-to-action, post-add-to-cart flyout, and integrations with multiple internal APIs while coordinating implementation across the PDP and Autoship teams; drove 12.5K incremental weekly units and \$12M annualized revenue.
- Designed and implemented reusable React components powering Chewy+ membership experiences, including SmartShelf upsells and free shipping trackers, while consolidating duplicate UI architecture and integrating Loyalty APIs; contributed to an increase of 2.4K weekly Chewy+ signups.
- Built reusable pricing and promotional components for Autoship experiences, contributing to experiments that increased Autoship enrollment by 8–11K weekly signups while maintaining checkout conversion.
- Architected and implemented AWS Feature Store with the PDP platform to access personalized user purchase-history, designing new infrastructure and reusable UI components that supported an experiment resulting in increased average selling price.
- Migrated PDP authentication services from legacy infrastructure to Chewy's new Guest Service during the company's EKS modernization, architecting frontend integration changes and resolving production issues involving bot traffic and guest session management.
- Implemented an A/B experiment for Private Brand product pages, delivering feature-flagged architecture that increased PDP conversion by 19 bps, add-to-cart success by 42 bps, and Chewy Composite Value by 4.31%.
- Built the Autoship post-add-to-cart experience from the ground up for authenticated customers, increasing conversion by 14 bps while maintaining Autoship adoption and supporting experimentation across customer segments.

5 Stones Group, NFP

Sycamore, IL (Remote)

Software Engineer I

July 2024 – November 2024

- Developed customer-facing features and resolved production issues for Annunciate.io, a white-label multimedia SaaS platform, improving usability and administrative workflows.
- Redesigned the platform's Elasticsearch-powered content search by configuring custom analyzers and field-matching strategies, improving search relevance and discoverability across multimedia content.
- Enhanced user experience by resolving video playback issues, improving Open Graph sharing through dynamic metadata and image optimization, and implementing role-based administrative UI features.

Chewy, Inc.

Boston, MA

Software Engineering Intern

June 2023 – August 2023

- Migrated the My Pet Health experience from a legacy microsite into a React single-page application, improving Google Lighthouse performance by 160% while modernizing the customer experience.
- Eliminated an unnecessary AWS Elastic Kubernetes Service (EKS) deployment through SPA adoption, generating approximately \$14K in annual infrastructure savings.
- Improved accessibility, expanded Jest unit test coverage to 78%, and partnered with product stakeholders to refine UX and deliver production-ready React components.
